COCKPIT COVER

Cutting Edge Canvas Attachment...

Eliminates Snaps! ★ Continuous Watertight Seal

Ultra E-Z to Install & Remove ★ Sleek Look

Stays attached at all trailering speeds, unlike snaps!

The cleanest look for boat canvas to date, greatest ease-of-use & it works with existing windshields!

TEL: 941-747-1900 | INFO@AMERITEXFABRICS.COM

Solves so many of the issues that both boatbuilders & boaters have disliked about canvas covers over the years...

★WHAT IS IT?

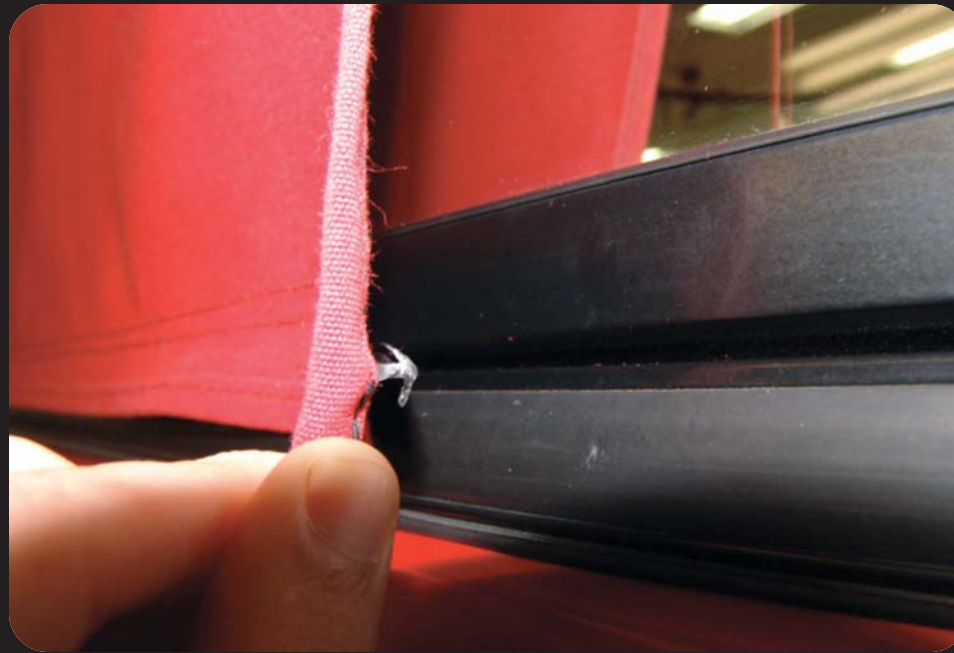

- A system that incorporates a rubber seal sewn into the edge of the canvas cover, replacing the metal snaps that have been the standard for decades
- Fabricated from Pellethane™, which has superior weather and temperature resilience
- Patented!

★HOW DOES IT WORK?

- Design allows the rubber to simply be pressed into the same track that normally holds the snaps
- Basically, it's like closing a Ziploc® bag, and SureSeal™ provides a closure that is just as tight!

★WHO CAN USE IT?

- Because it's designed to fit into the standard bottom trim "snap track" of any Taylor Made Systems windshield, boatbuilders can begin using this new attachment system immediately

Basically, it's like closing a Ziploc® bag, and SureSeal™ provides a closure that is just as tight!

★O.E.M. ADVANTAGES?

- Installation time will be greatly reduced (no need to install snaps along the bottom edge of the windshield or time consuming alignment)
- No need to change windshield design

★CONSUMER ADVANTAGES?

- E-Z! to install canvas (SureSeal™ tells you exactly where to start)
- Continuous seal is more watertight than intermittent snaps
- Cover will stay on at all trailering speeds and not unsnap or detach
- Much-improved look, including...
- No snaps left behind on the windshield when the canvas is removed
- No snap heads on the outside of the canvas when installed
- Smooth edge, eliminates "scalloping"
- Normally, there are issues with replacement canvas and snap alignment, with SureSeal™ that's a thing of the past!
